

Cleaning Concentrates

Cleaning concentrates provide a concentrated cleaning solution in a bulk container and are diluted with water before use. Compared to ready-to-use (RTU) products, concentrates cost less per diluted unit, use less packaging materials, lower transportation and storage costs and makes less waste, making them a much more sustainable option.

Example:

CONCENTRATE VS READY-TO-USE

1 x 2 LITRE
to make
167 LITRES
of RTU Solution*

34 x 5 LITRE
to make
167 LITRES
of RTU Solution*

*Parameters for dilution using a 1 litre applicator bottle: This does depend on the dilution rate for example with the 2L Glass Cleaner concentrate we recommend using 12ml (i.e. 3 pumps of 4ml push pump) of the product added to make 1 litre of ready-to-use solution.

\$0.37
Cost per RTU bottle

2 Litre SH1 Glass Cleaner Concentrate
HCK444

- Recommended dilution ratio: 12ml

\$61.⁷⁵

VS

\$4.31
Cost per RTU bottle

5 Litre Window Cleaner
HCK332

\$21.⁵⁶

CONCENTRATES

Generate up to **98% Less** Packaging Waste

Save up to **91% of Costs** per Diluted Unit

One order of a 2 Litre Concentrate means: **99% Less Weight** in Freight Handling and Carrying

2 Litre Standard Plunger HCK65

To ensure accurate dilution and dosage rates to maximise your savings (e.g. One push pump equates to 4ml solution, Two push pumps equates to 8ml use.)

Now \$7.84
