## QMT670 ( SEMIAUTOMATIC )

---

The semiautomatic dough sheeter QMT670 is provided with the same mechanical components of our automatic models and for this reason it guarantees highly professional performances. The cylinders' rise and descent is managed automatically and it's storable in the practical color touch screen (100 programs). Through the same tool it is possible to set the belts' speed and the drive of flour duster and coiler (optional). The operator will only have to manage the inversion of the belts direction by means of the ergonomic direction arm or by the practical pedals. The working tables are easily foldable and removable for the machine movements. The flour tray, positioned on the central part and equipped with a safety sensor, allows an easy and fast access to the scrapers for the daily cleaning. At last, the wide cylinders' opening and the strong tables make this sheeter practical to use and long lasting in time.
