Ultra Concentrate 2L
HCK444

750ml Applicator Bottle
HCK431

Cleaning Vs. Sanitising

Cleaning: is the process of removal of dirt or other matter from a surface through the use of detergent & water.

Sanitiser: is the removal or reduction of bacteria and microorganisms from surfaces to a safe level.

Cleaning doesn't always remove all forms of bacteria. If your bench is coming into contact with raw food it's better to clean then sanitise to reduce the risk of harmful bacteria & viruses spreading.

Makes 500 750ml bottles. Dilution rate: 4ml per bottle.

SH4 Sanitiser
Ultra Concentrate 2L
HCK445

750ml Applicator Bottle

HCK61

Did you know?

For every 15 seconds spent washing hands, 10 times more bacteria is removed.

Damp hands are 1,000 times more likely to spread bacteria than dry hands.

Most bacteria on our hands is on the fingertips and under the nails.

Critical times for hand washing are before preparing foods and after going to the bathroom.

HOW TO HAND RUB?

with alcohol-based formulation

Dispense 2–5ml directly onto hands and rub them thoroughly. Look below to checkout how to rub your hands effectively to leave them squeaky clean.

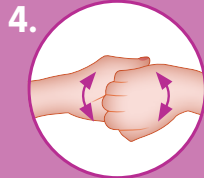

1. Apply a palmful of the product in a cupped hand & cover all surfaces.

2. Rub hands palm to palm.

3. Right palm over left dorsum with interlaced fingers and vice versa.

4. Backs to fingers to opposing palms with fingers interlocked.

5. Rotational rubbing of left thumb clasped in right palm and vice versa.

6. 20–30 sec—once dry, your hands are safe

HAND SANITISER

500ml
HCO23

Sanitise your hands after washing to burst bacteria's protective bubble leaving your hands **completely clean.**
