

URBAN CULTIVATOR

Code	Description
------	-------------

We now live in a world where consumers are ever more conscious of where their food is sourced and have a better understanding of the impacts of GM (genetically modified) foods and pesticides effects. These days, there is also an increase in plant-based meals among diners. All these trends make a point of difference which can make a big impact on your business.

- Growing greens costs up to 80% less than buying from a supplier
- Growing greens produces less CO₂ emissions than traditionally grown greens
- Temperature control: based on room temperature (no compressor)
- Castors and magnetic seals
- Auto pH and TDS monitoring
- Auto watering cycles
- Standard 3/4" water fittings
- Monthly average kWh: 65kWh

From farm to fork

From your Urban Cultivator Commercial to your plate to a patron—it's as fresh as it can get.

Welcome to the kitchen of the future

Having an Urban Cultivator gives you access to fresh, organic microgreens and herbs all year round.

Organic all the way

Align your restaurant or hotel with the organic movement by growing your own food in an Urban Cultivator. No chemicals or sprays are used at any point.

Easy to grow

The Urban Cultivator Commercial is a fully automated appliance that makes growing easy, so you can concentrate on service instead.

Packed with nutrition

Microgreens not only take less time to grow when compared to their mature counterparts, but are denser in nutritional content. They're as healthy as they are flavourful.
